

Upper Critical Values for the Friedman Test

(k treatments and b blocks)

- Notes 1. In the table below, the critical values give significance levels as close as possible to, but not exceeding the nominal α .
2. For values of k and b beyond the range of the table below, various approximations are available.

	$k = 3$		$k = 4$		$k = 5$		$k = 6$	
b	0.05	0.01	0.05	0.01	0.05	0.01	0.05	0.01
2	-	-	6.000	-	7.600	8.000	9.143	9.714
3	6.000	-	7.400	9.000	8.533	10.13	9.857	11.76
4	6.500	8.000	7.800	9.600	8.800	11.20	10.29	12.71
5	6.400	8.400	7.800	9.960	8.960	11.68	10.49	13.23
6	7.000	9.000	7.600	10.20	9.067	11.87	10.57	13.62
7	7.143	8.857	7.800	10.54	9.143	12.11		
8	6.250	9.000	7.650	10.50	9.200	12.30		
9	6.222	9.556	7.667	10.73	9.244	12.44		
10	6.200	9.600	7.680	10.68				
11	6.545	9.455	7.691	10.75				
12	6.500	9.500	7.700	10.80				
13	6.615	9.385	7.800	10.85				
14	6.143	9.143	7.714	10.89				
15	6.400	8.933	7.720	10.92				
16	6.500	9.375	7.800	10.95				
17	6.118	9.294	7.800	11.05				
18	6.333	9.000	7.733	10.93				
19	6.421	9.579	7.863	11.02				
20	6.300	9.300	7.800	11.10				
21	6.095	9.238	7.800	11.06				
22	6.091	9.091	7.800	11.07				
23	6.348	9.391						
24	6.250	9.250						

	$k = 3$		$k = 4$		$k = 5$		$k = 6$	
b	0.05	0.01	0.05	0.01	0.05	0.01	0.05	0.01
25	6.080	8.960						
26	6.077	9.308						
27	6.000	9.407						
28	6.500	9.214						
29	6.276	9.172						
30	6.200	9.267						
31	6.000	9.290						
32	6.063	9.250						
33	6.061	9.152
